

Neurotoxin

Botox / Dysport / Jeuveau

Before your treatment

- Avoid blood thinning medications such as ibuprofen, Motrin, Aleve for 5-7 days prior as well as herbal supplements (vitamin E, omega-3, St. John's Wort)
- Avoid alcoholic beverages for 24 hours before (and after) your treatment to avoid excessive bruising.
- Arrive to your appointment with a clean face, free of makeup.

After treatment instructions:

- For at least 4 hours following your treatment, AVOID:
 - Placing excessive pressure on the areas treated
 - Strenuous exercise or excessive sweating
 - Laying down completely flat or bending over for long periods of time
- No facials for 1 week
- You can take Tylenol if you experience any tenderness or discomfort
- You can reapply makeup after 4-6 hours

Neurotoxins are a medication which requires specific dosing, placement, and can be very customizable. It can take 2 full weeks for the product to take full effect. Please wait 2 weeks to return to the office for any touch-ups.

Since neurotoxins are a medication, it is likely that your body will build antibodies and become resistant to a specific product after consistent use. Meaning that it may not work as "strong." Your injector may need to increase your dose, or switch you to a different brand of neurotoxin for your next appointment so that you continue to receive effective treatment.
